Icebreaker «Kapitan Dranitsyn»

The icebreaker “Kapitan Dranitsyn” is your floating hotel and ice breaking base camp for the whole voyage. At first sight she looks a little strange, tall like a tower put on top of the relatively low freeboards. The years of hard icebreaking duty have proved the firmness of the vessel along with her high effectiveness. Except for the short summer period the icebreaker leads oil tankers and cargo carriers through the heavy Arctic ice. “Kapitan Dranitsyn” is a powerful icebreaker designed for working in the conditions of the Arctic region and the Baltic Sea. Built in March 1980 at shipyard Wartsila, Finland, she was upgraded in Norway in 1999. This icebreaker belongs to the Russian State. The interior of the “Kapitan Dranitsyn” is a combination of simplicity and comfort. It is of high standards’ expedition style. Icebreakers are the vessels of great opportunities, the exploration of which is quite interesting as well! The icebreaker is equipped with the best satellite navigation system and satellite communication facilities.
